

WORTH Cloud Engineer Tech Test

Welcome! We need you! Help us deliver a static site based on the source code [available here](#) 🚀

You may use any cloud provider of your choosing, however you must use Terraform to define your infrastructure.

Please store your project inside a public Git repository and submit a link to it as your response.

Please deliver the product to the best of your ability, as if you were working on a project for us & with the goal of handing it over to us before your technical interview.

Here's some more details of what we need:

- The site should be served to the public.
- Two marketing users Alice & Malory should have access to only add to the /news section
- Bobby the content editor needs to be able to edit the entire website.
- Charlie works in HR and should be able to update /people.html
- Add a custom error document.
- Automation of testing & deployment of infrastructure.

Remember there are no time limits: you will receive extra merit for showcasing your abilities and we don't necessarily expect you to complete all these tasks. We're interested in your approach and the design choices you make.

Submit your code in a public Git repository.

GLHF 👍
